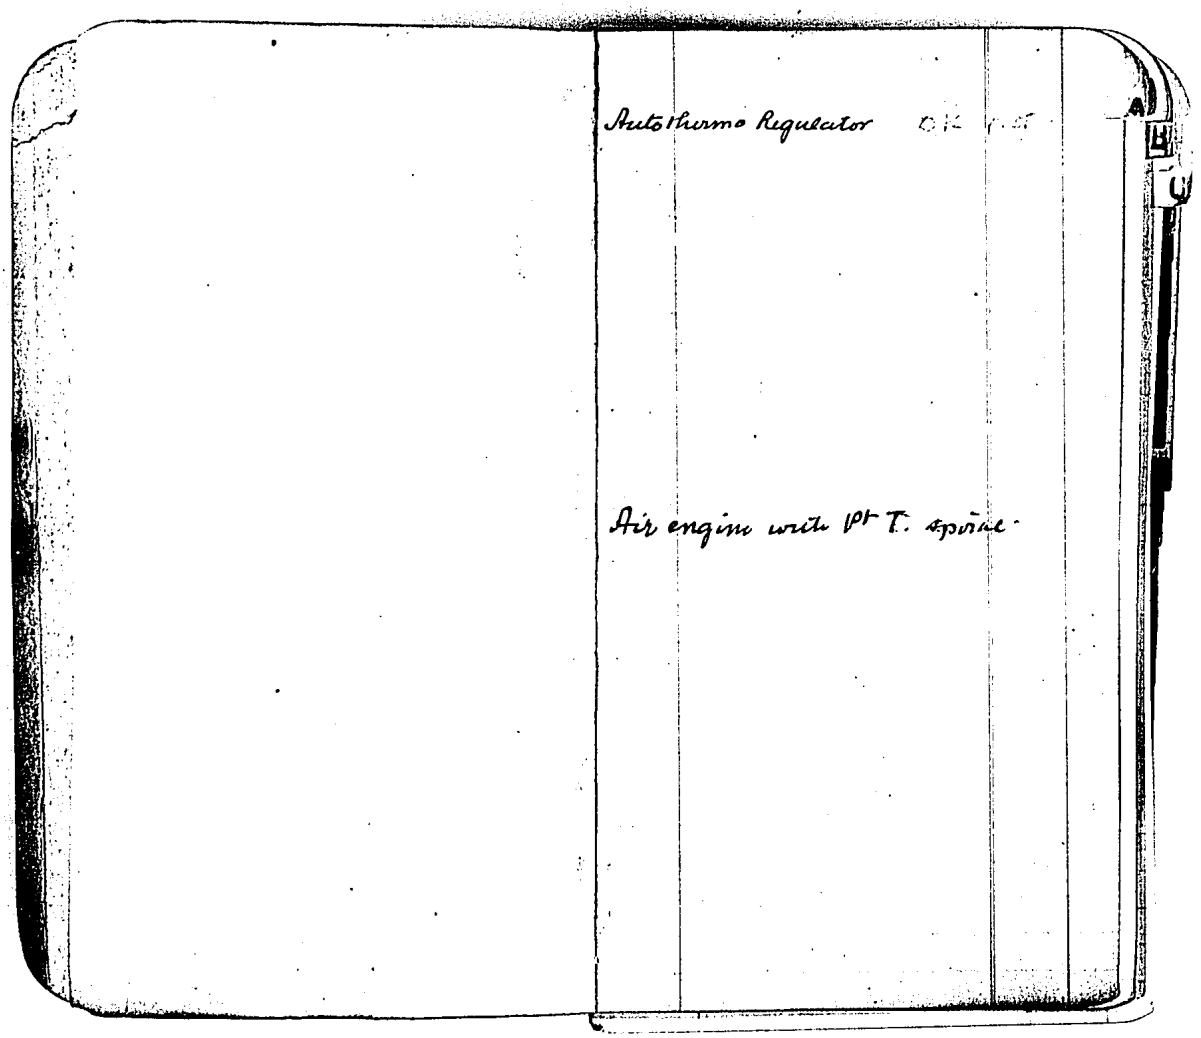
Pocket Notebook, PN-80-00-01

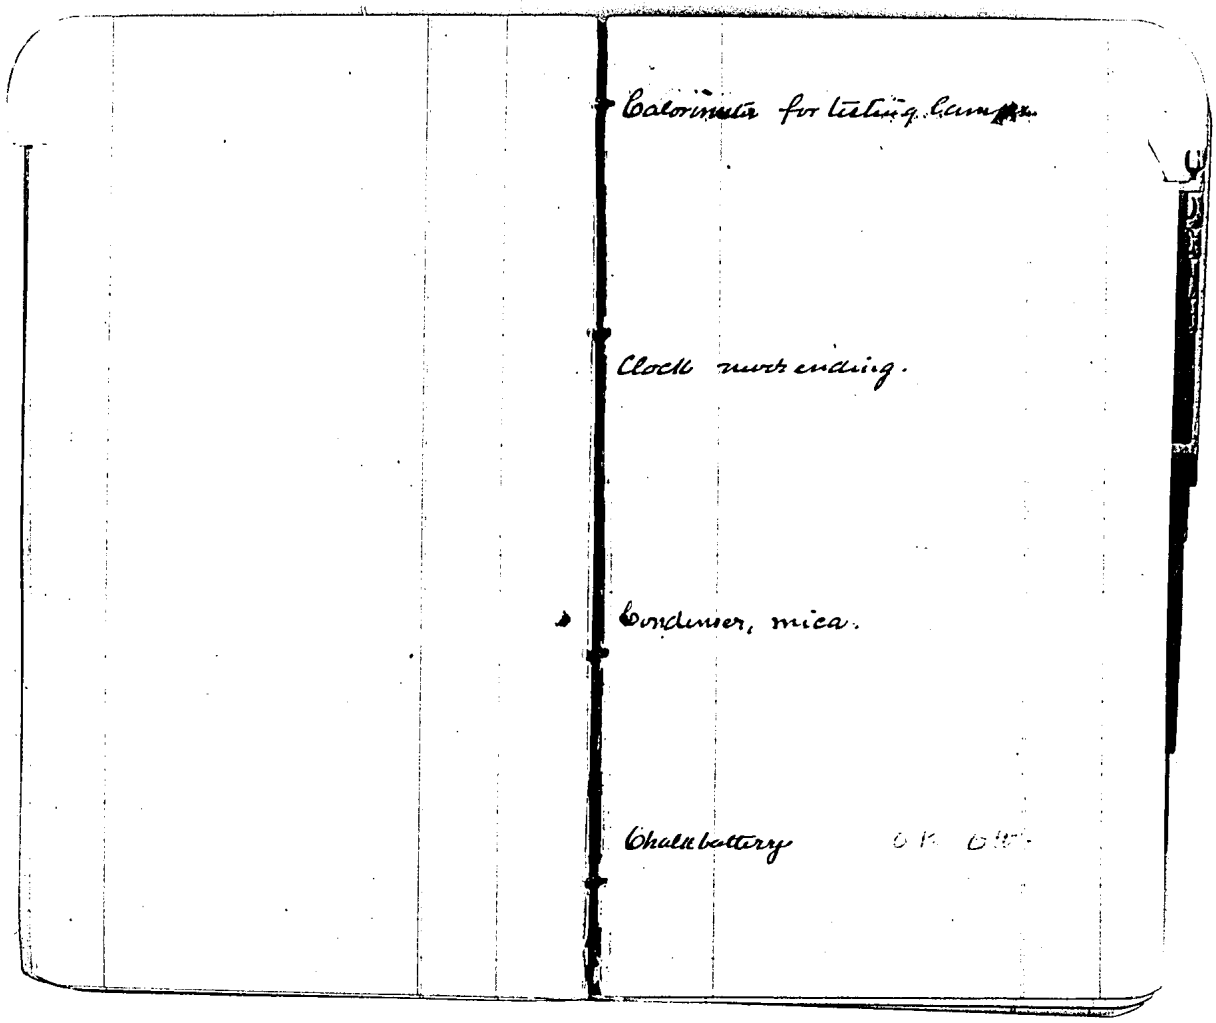
This undated pocket notebook contains lists of devices, ranging from chalk batteries, electric fans, and lamps to exotic items such as an "odorscope." Some of the listings are accompanied by drawings. The entries are in the hand of Charles Batchelor. They are arranged in alphabetical order, and many of them are initialed by John F. Ott. The front cover is labeled "156." The pages are unnumbered. Approximately 25 pages have been used.



Auto thermo Regulator
Air engine with Pt T. spring.

Bamboo, all shapes, ales paper.

Balance, counter for magnetism.



Calorimeter for testing Cam[illegible]

Clock work winding.

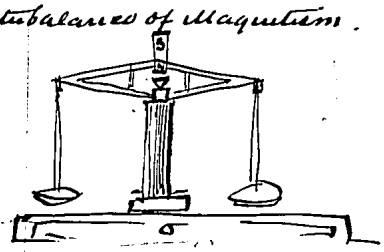
Condenser, mica.

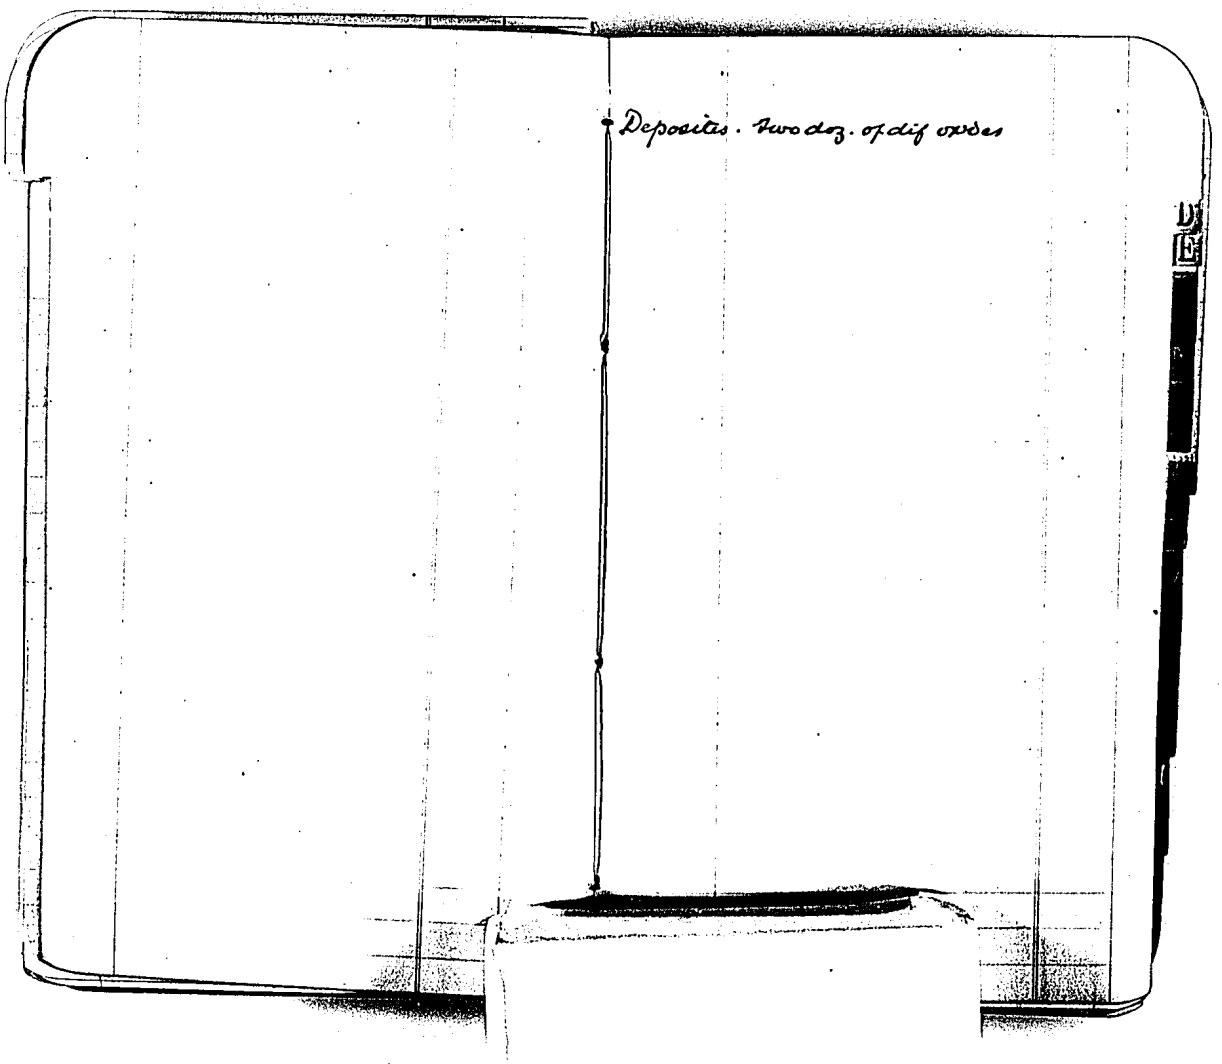
Chalk battery

Cigar, Cigarettes

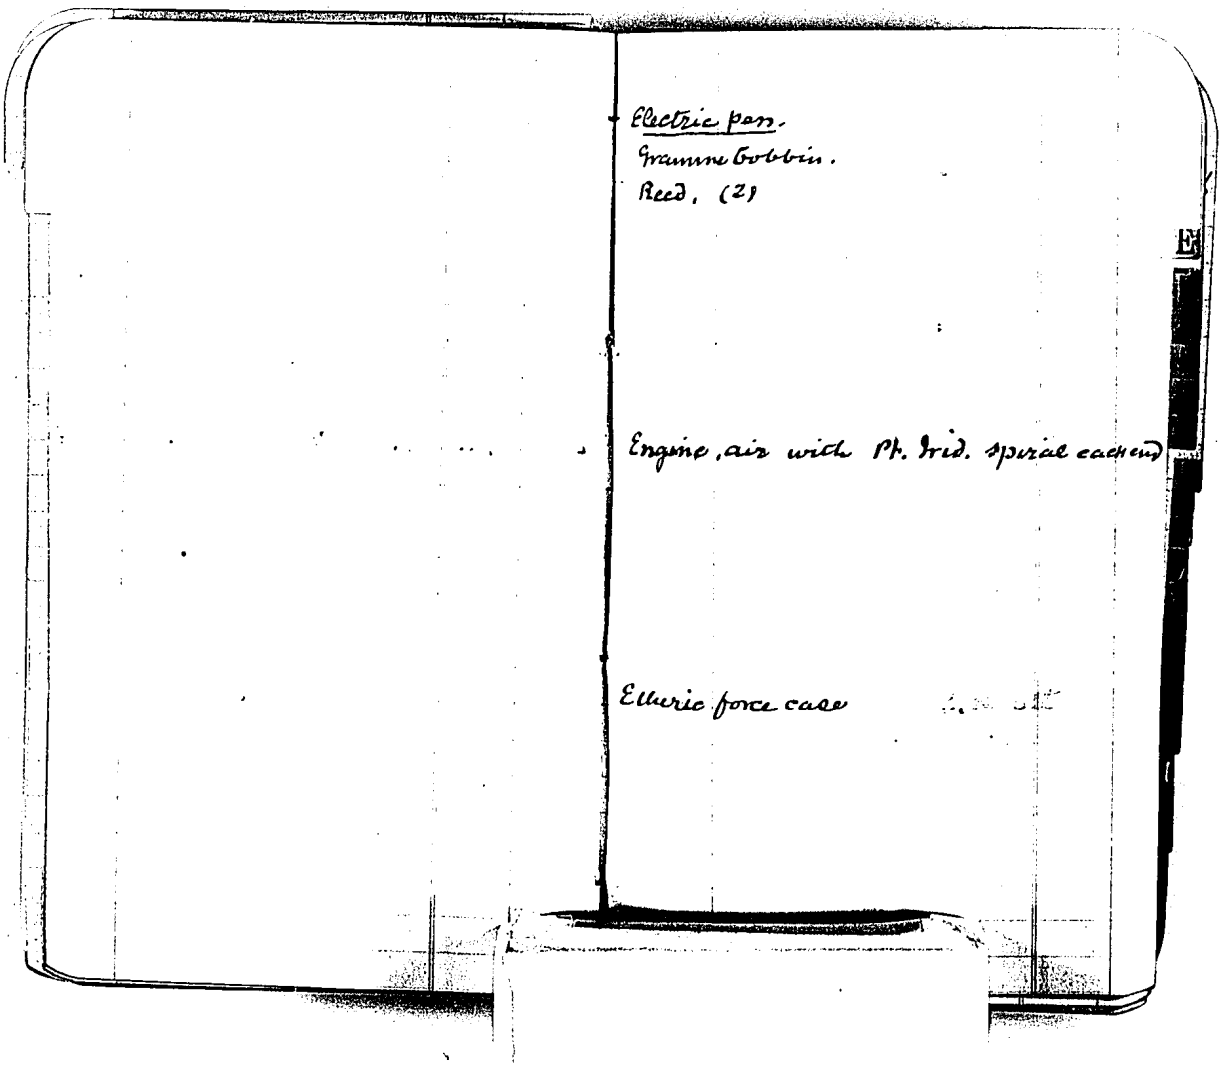
Carbon case of including Graphite

Counterbalances of Magnetism.



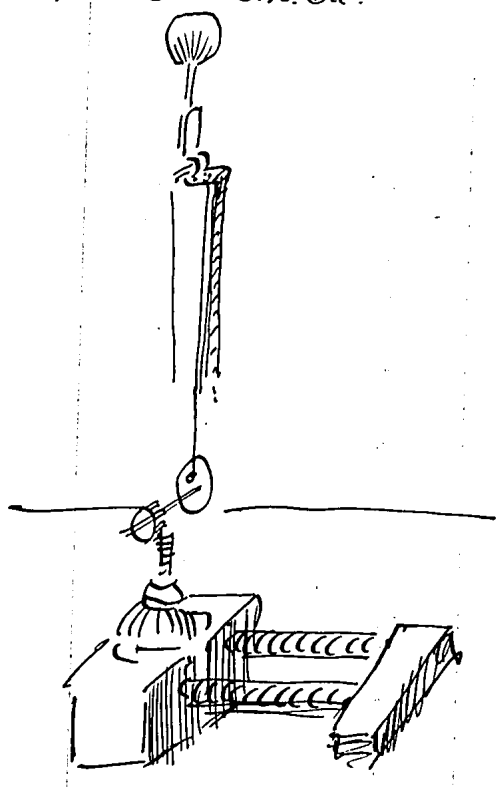


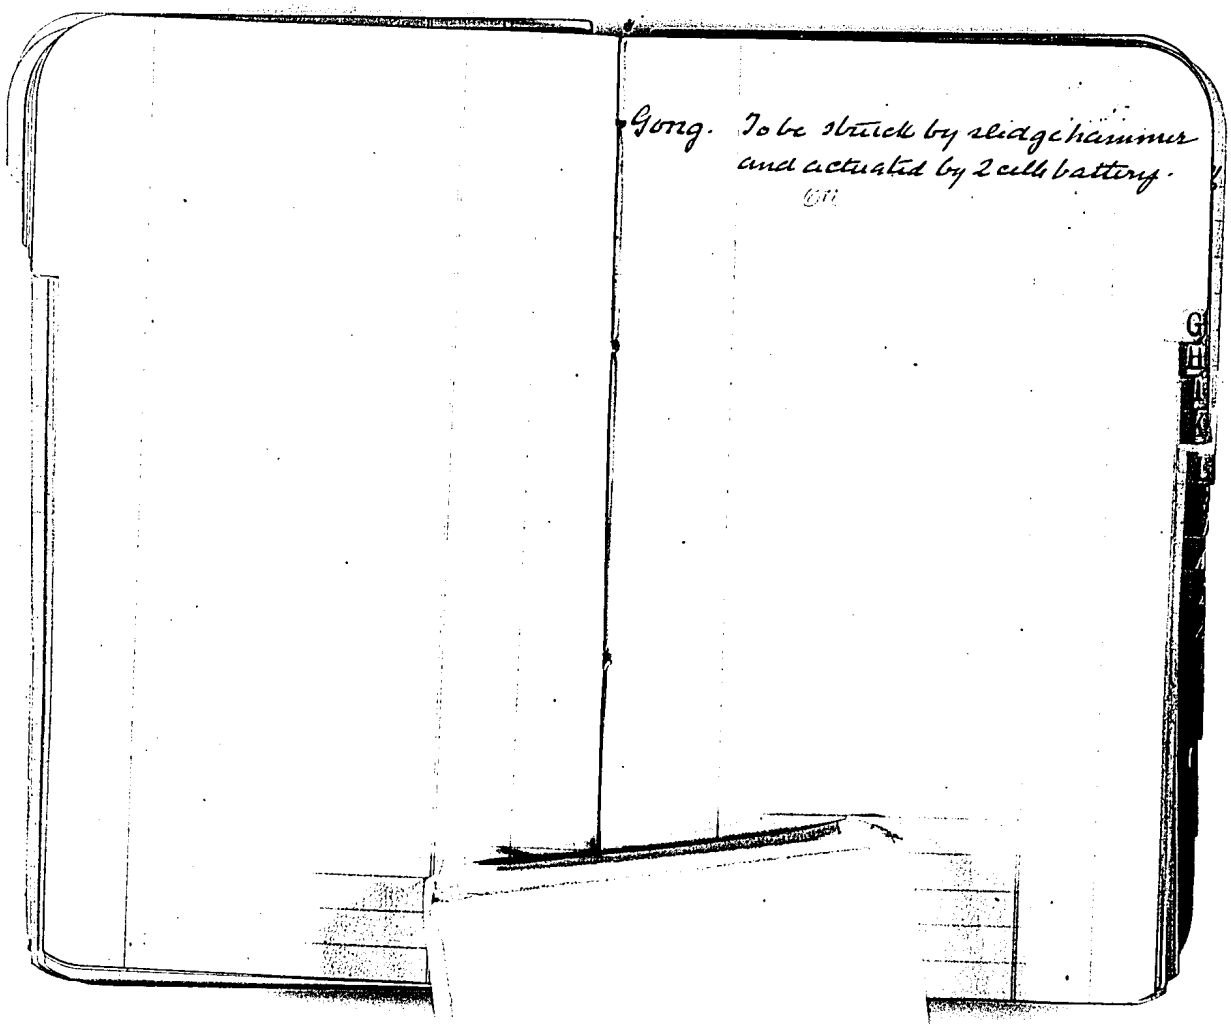
Deposits. Two doz. of dif oxides



Electric pen.
Gramme Bobbin.
Reed. (2)
Engine, air with Pt. Irid. spiral cooled
Elleric force case

Fan, electric O. K. Ott.



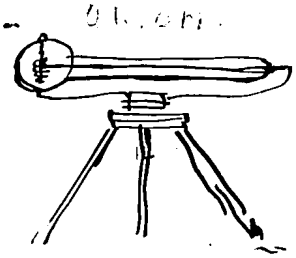


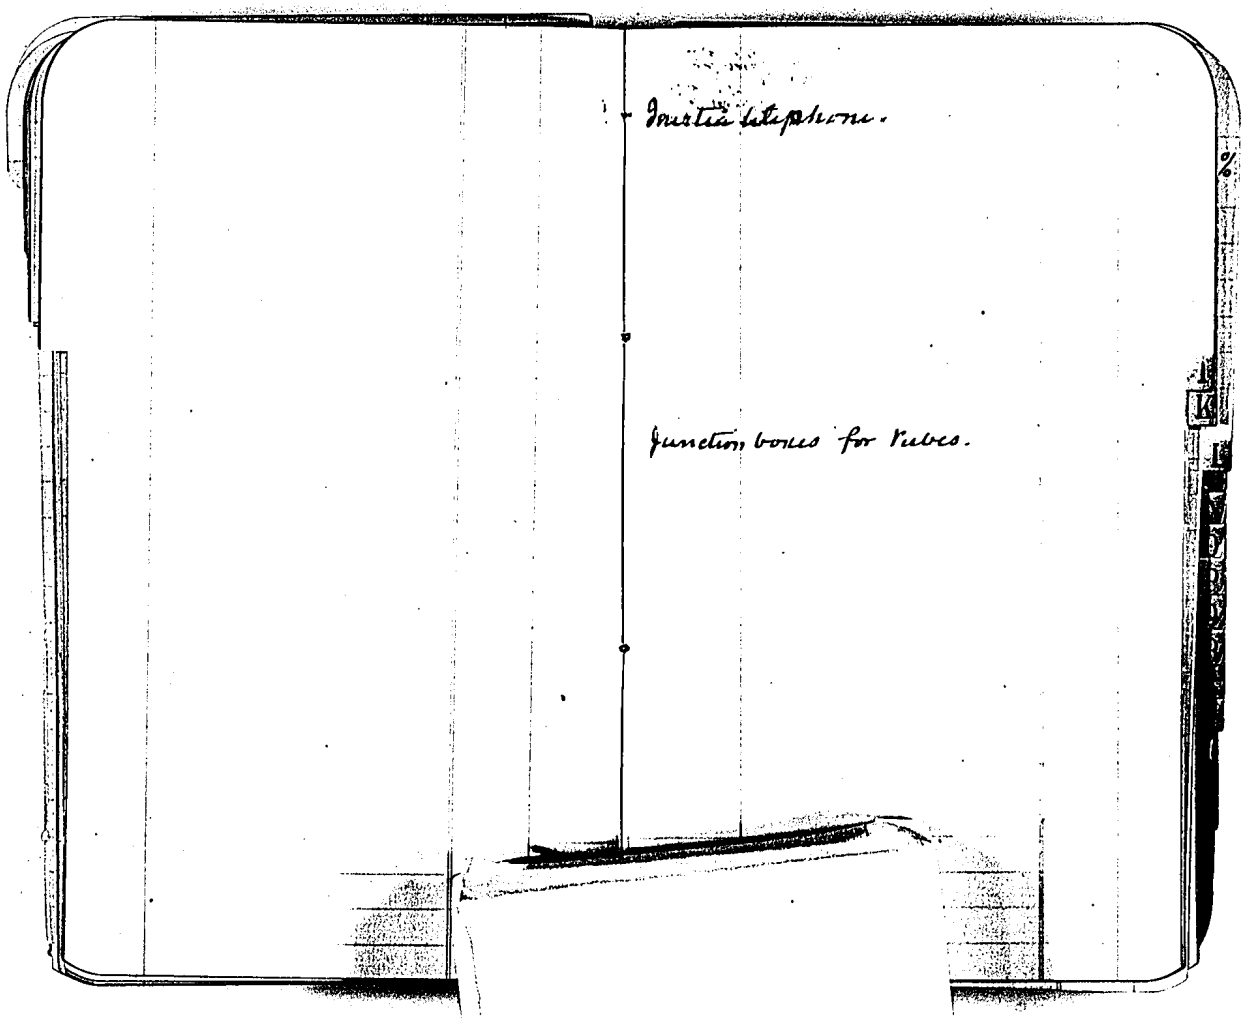
Gong. To be struck by sledge hammer and actuated by 2 cells battery.

Galvanometer

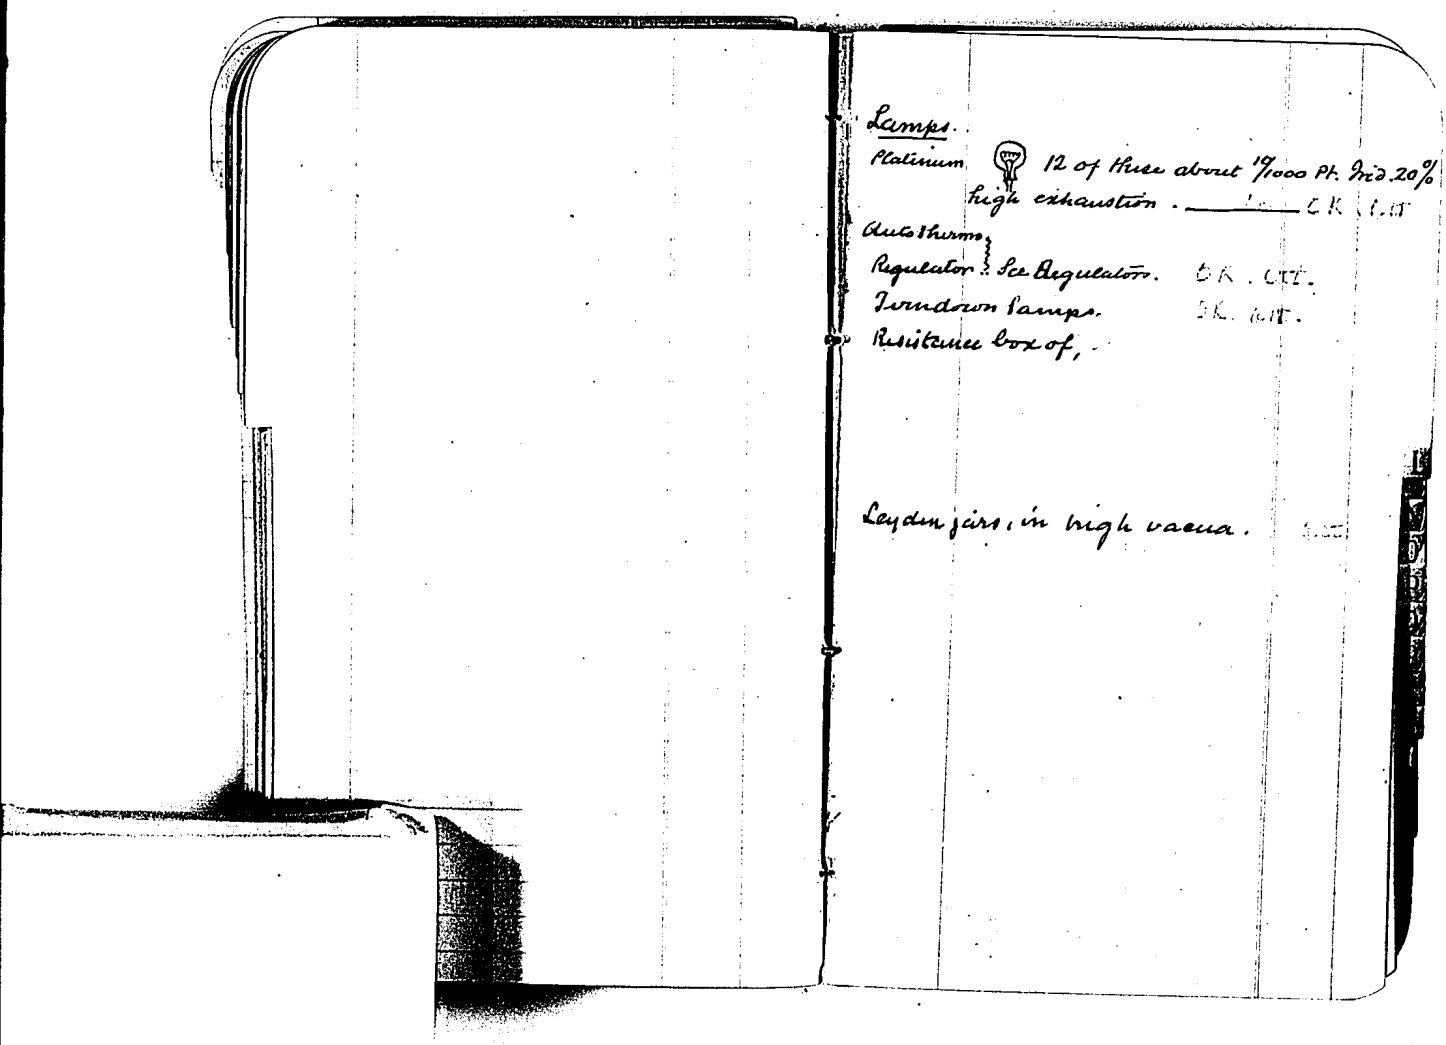
Motographie a

Thermo. z





Inertia telephone.
Junction boxes for wires.



Lamps.

Platinium 12 of these about 1/1000 Pt. Ird. 20%

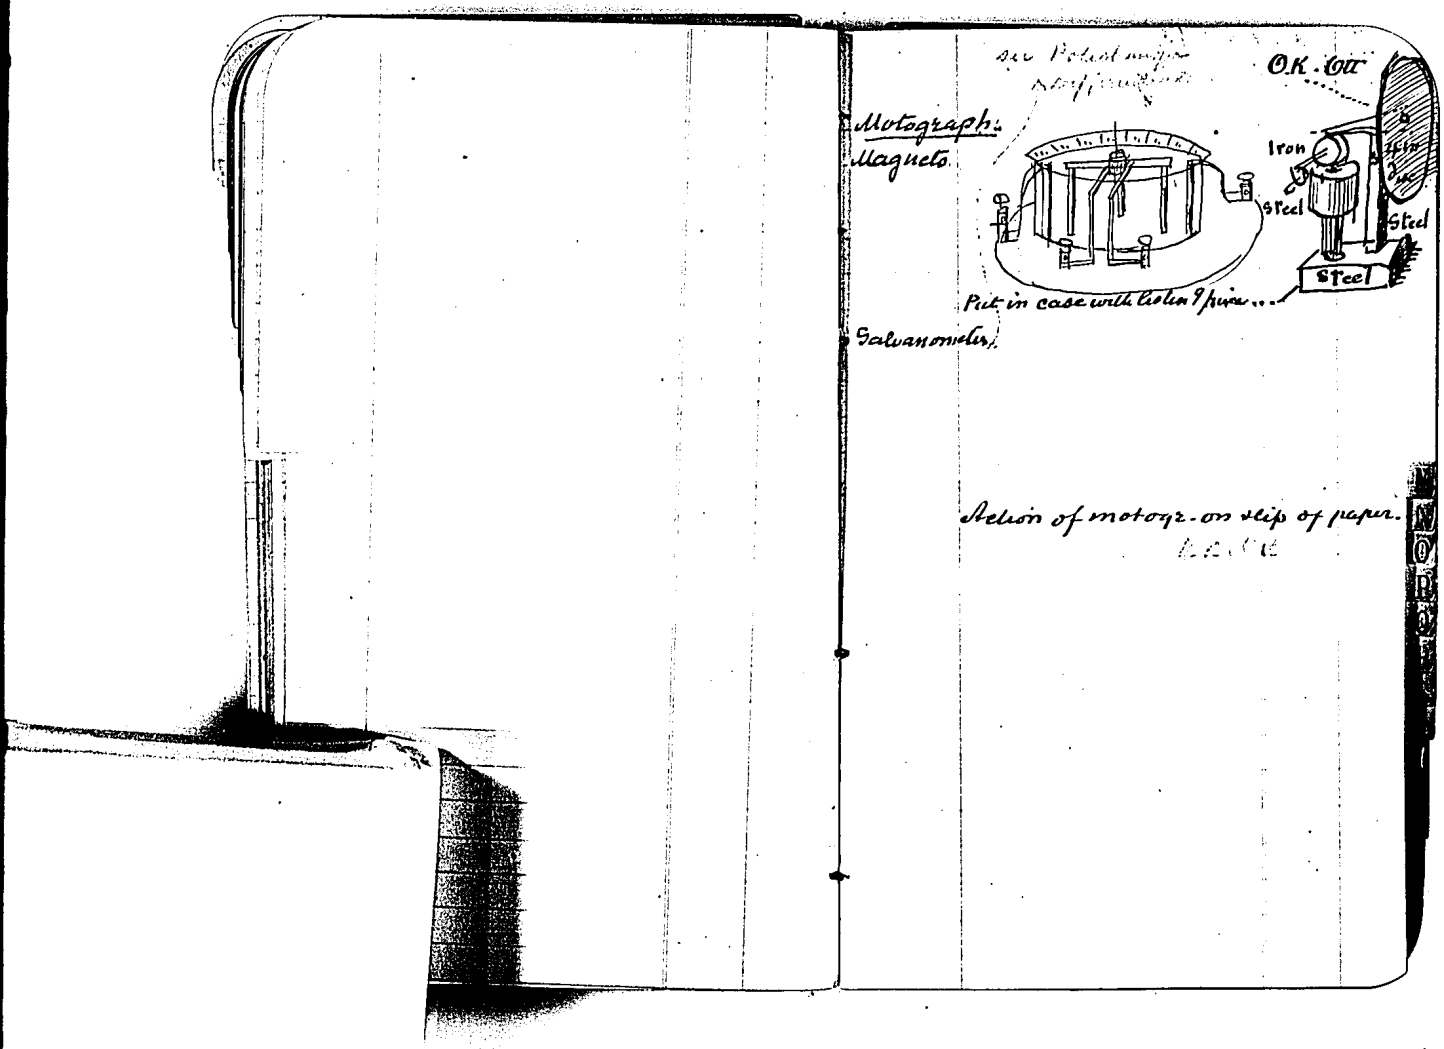
high exhaustion. _____ D.K. C.U.T.

Auto thermo Regulator } See Regulators. D.K. C.U.T.

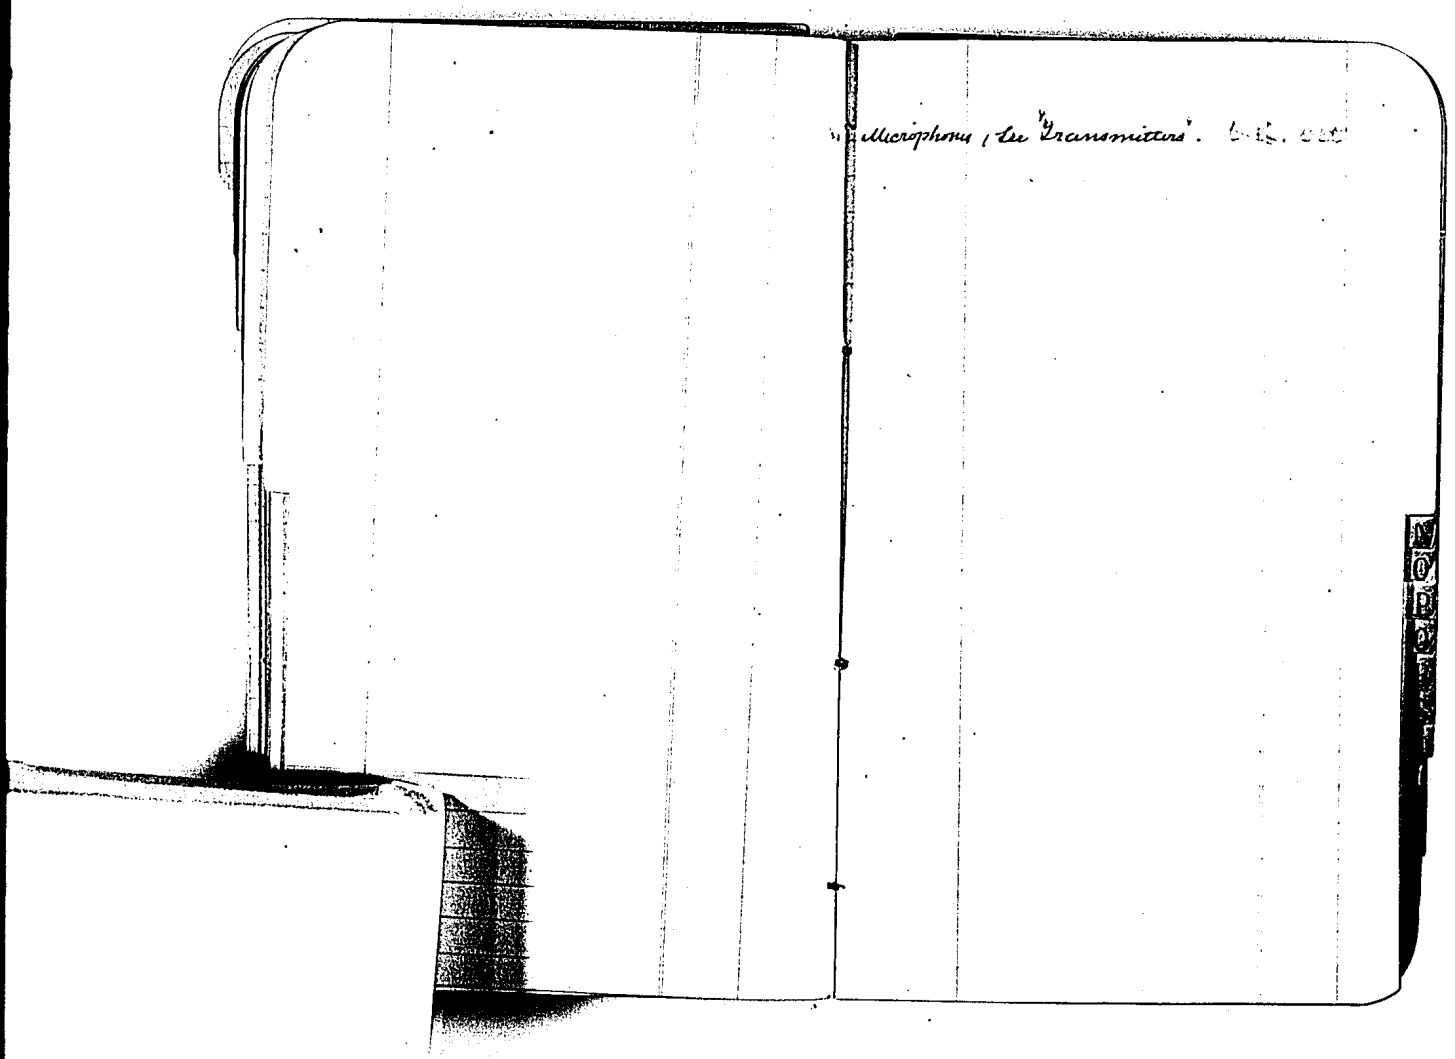
Turndown Lamps. D.K. C.U.T.

Resistance box of,

Leyden jars, in high vacua. D.K. C.U.T.

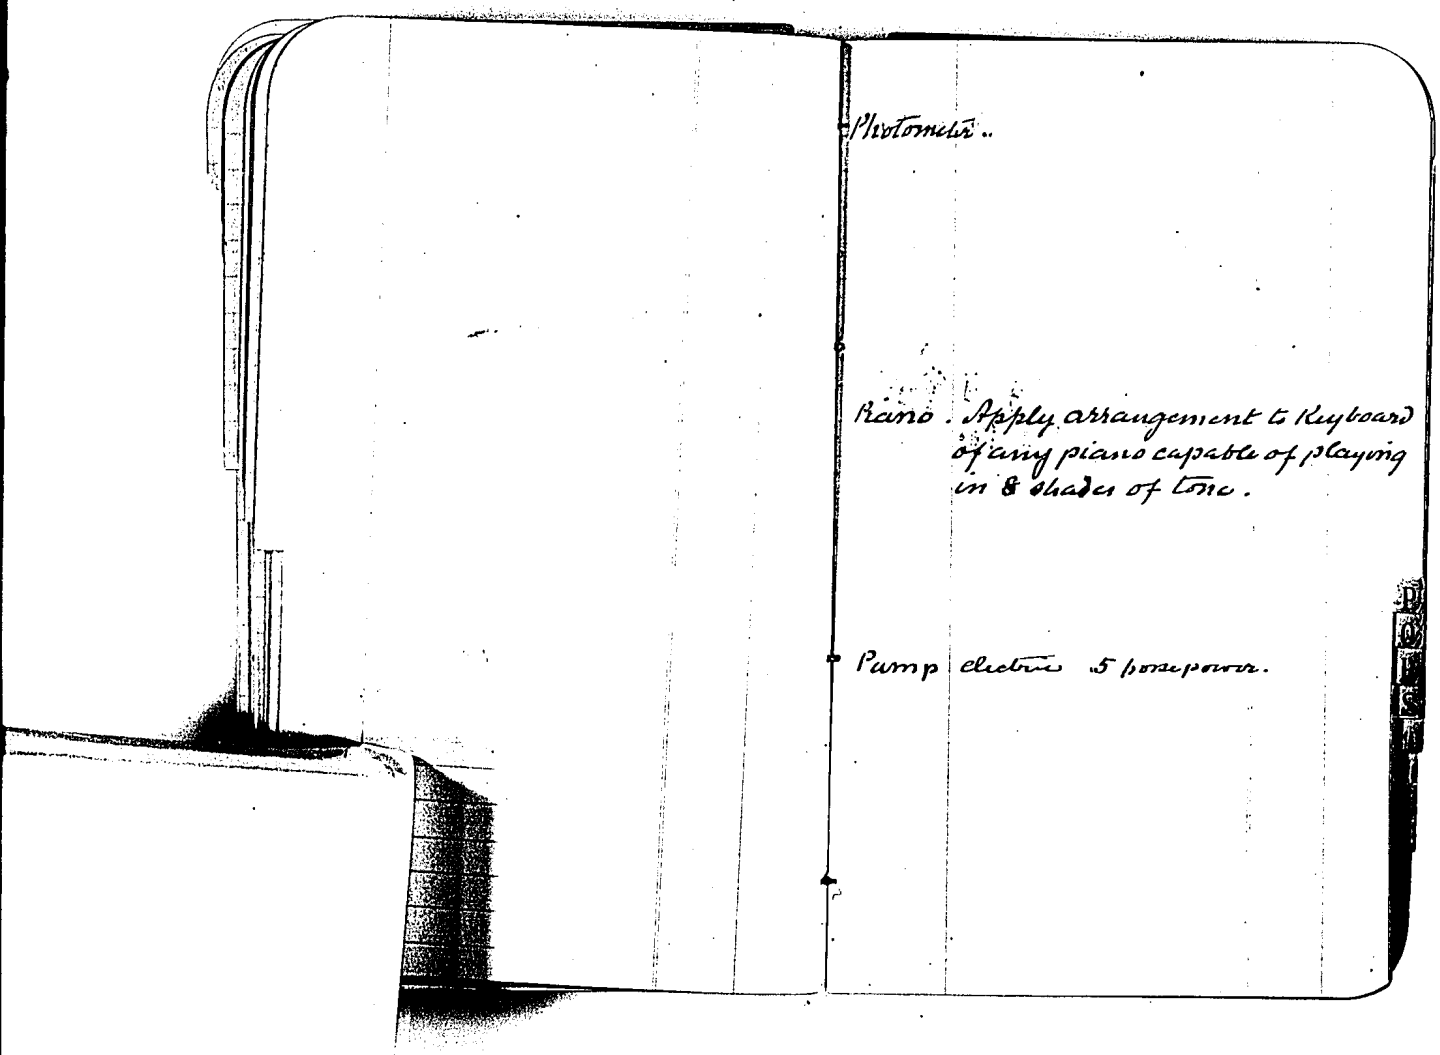


Motograph:
Magneto.
O.K. Oil
Iron
Steel
Steel
Steel
Put in case with Leclanché Jars...
Galvanometer.
Section of motogr. on slip of paper.



Microphone, Tee Transmitters.

/

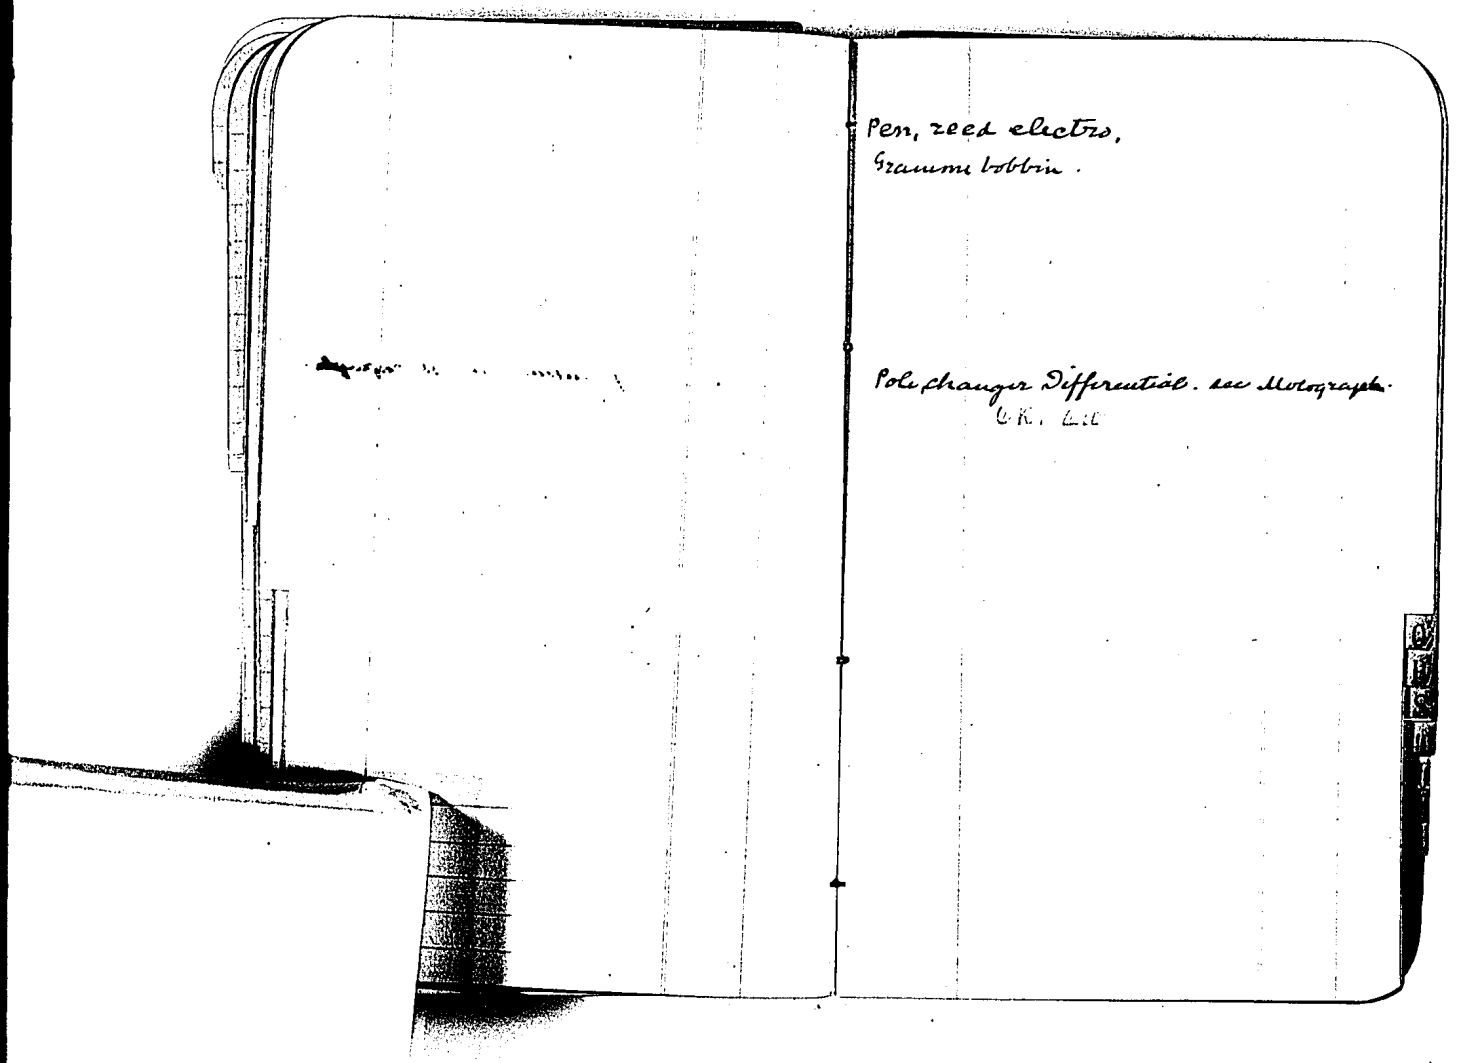


Photometer..

Piano. Apply arrangement to Keyboard of any piano capable of playing in 8 shades of tone.

Pump electric 5 horsepower.

/



Pen, reed electro,
Gramme bobbin.

Pole changer Differential. see Motograph.
C.K. L.L.

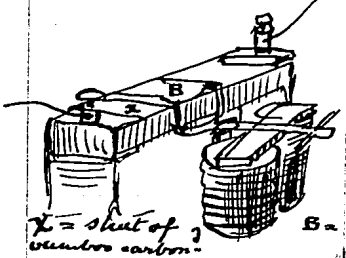
/

Relays

Expansion Auto press, such as was used to run the electric pen.

Repeater, telephone.

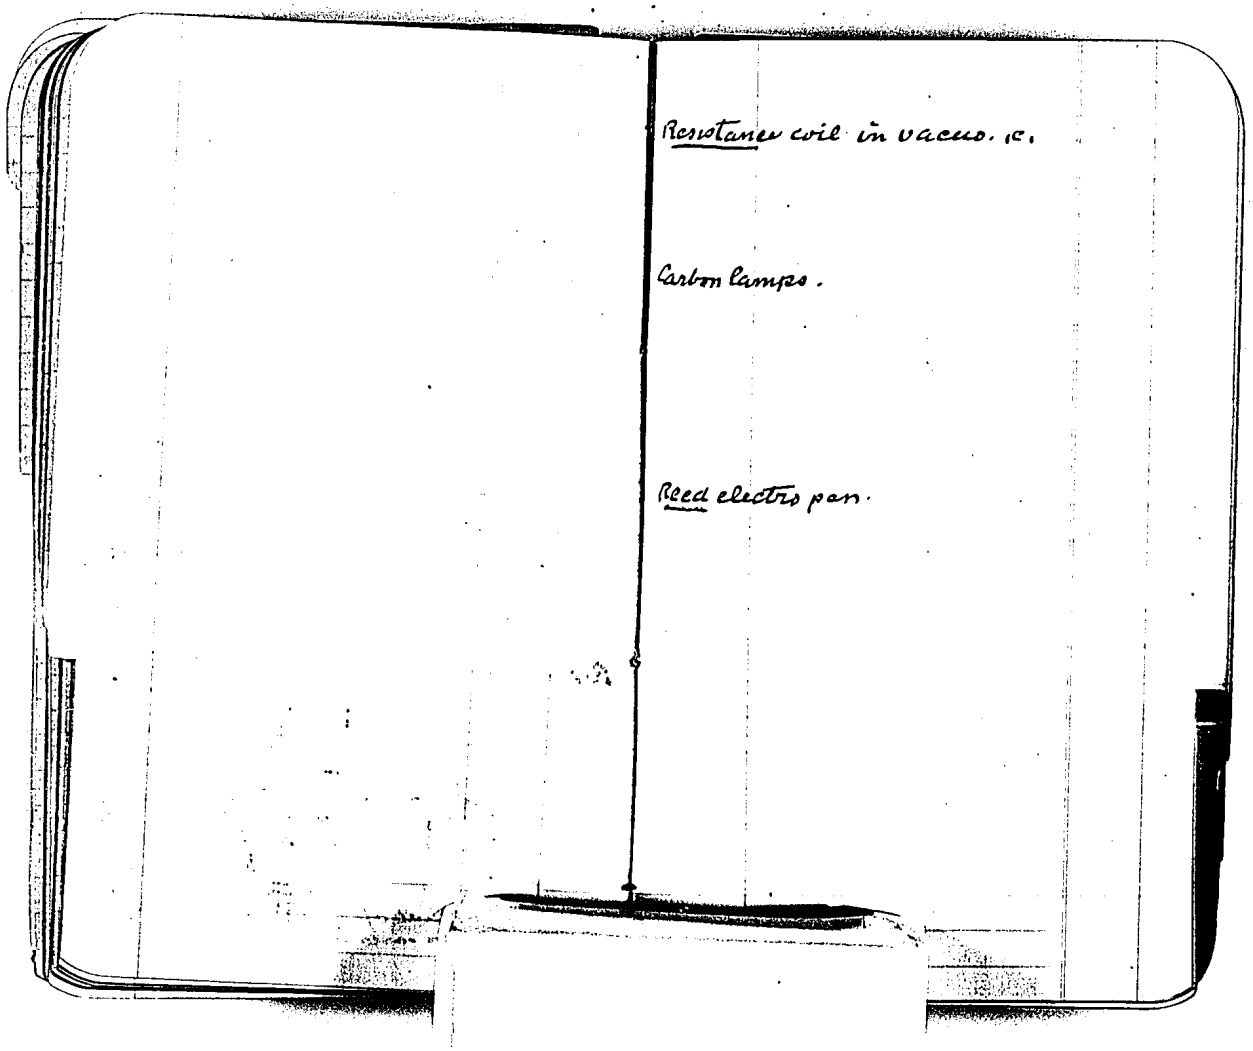
Resistance, variable. C. H. Ott.



S = slant of vanadium carbon

B = spring

/

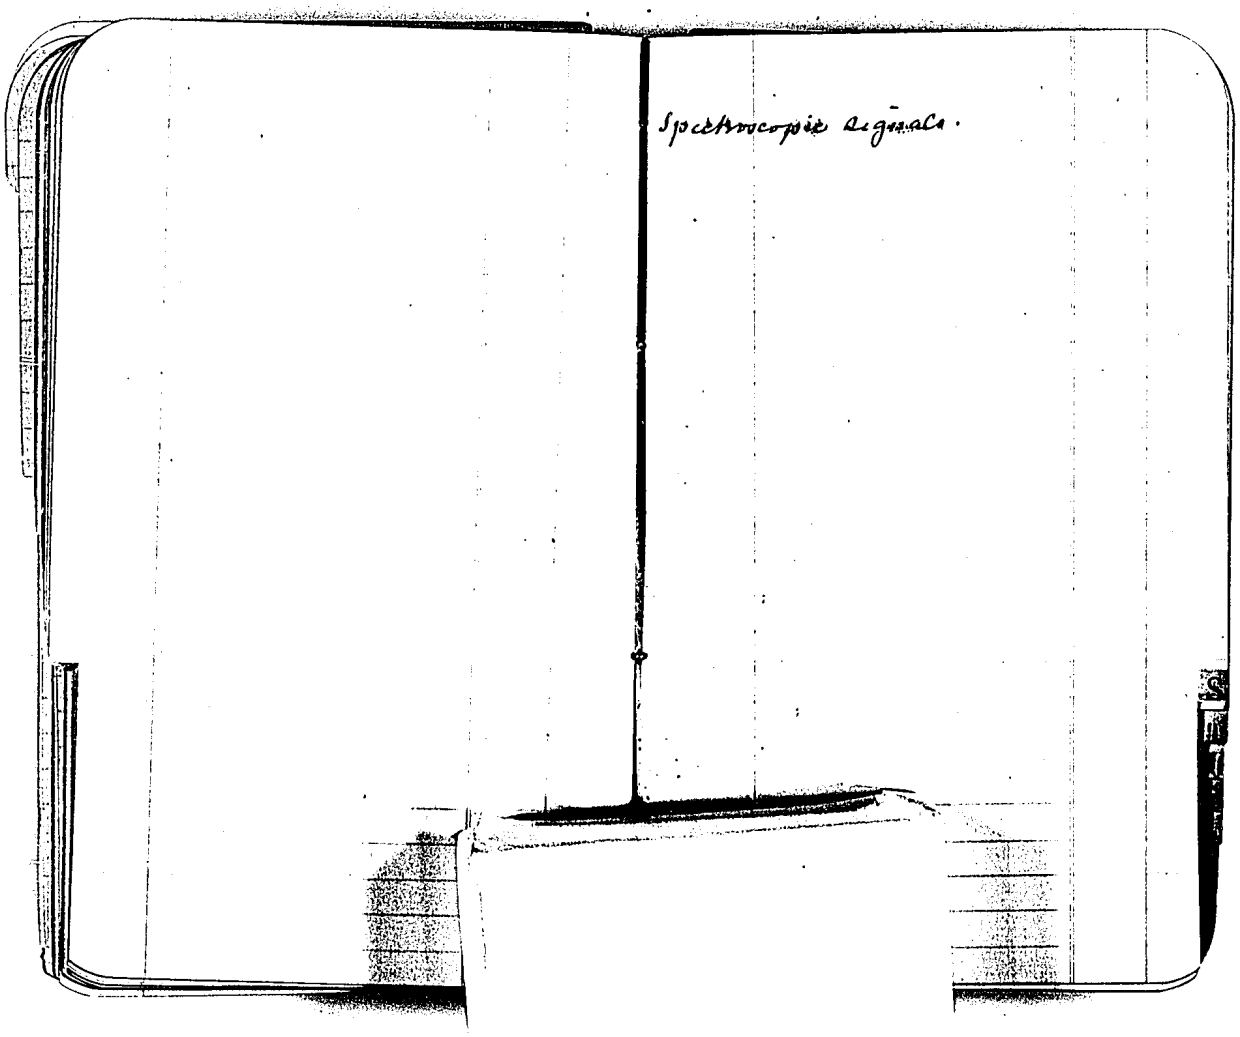


Resistance coil in vacuo. &c.

Carbon lamps.

Reed electric pen.

/



Spectroscopie réglable.

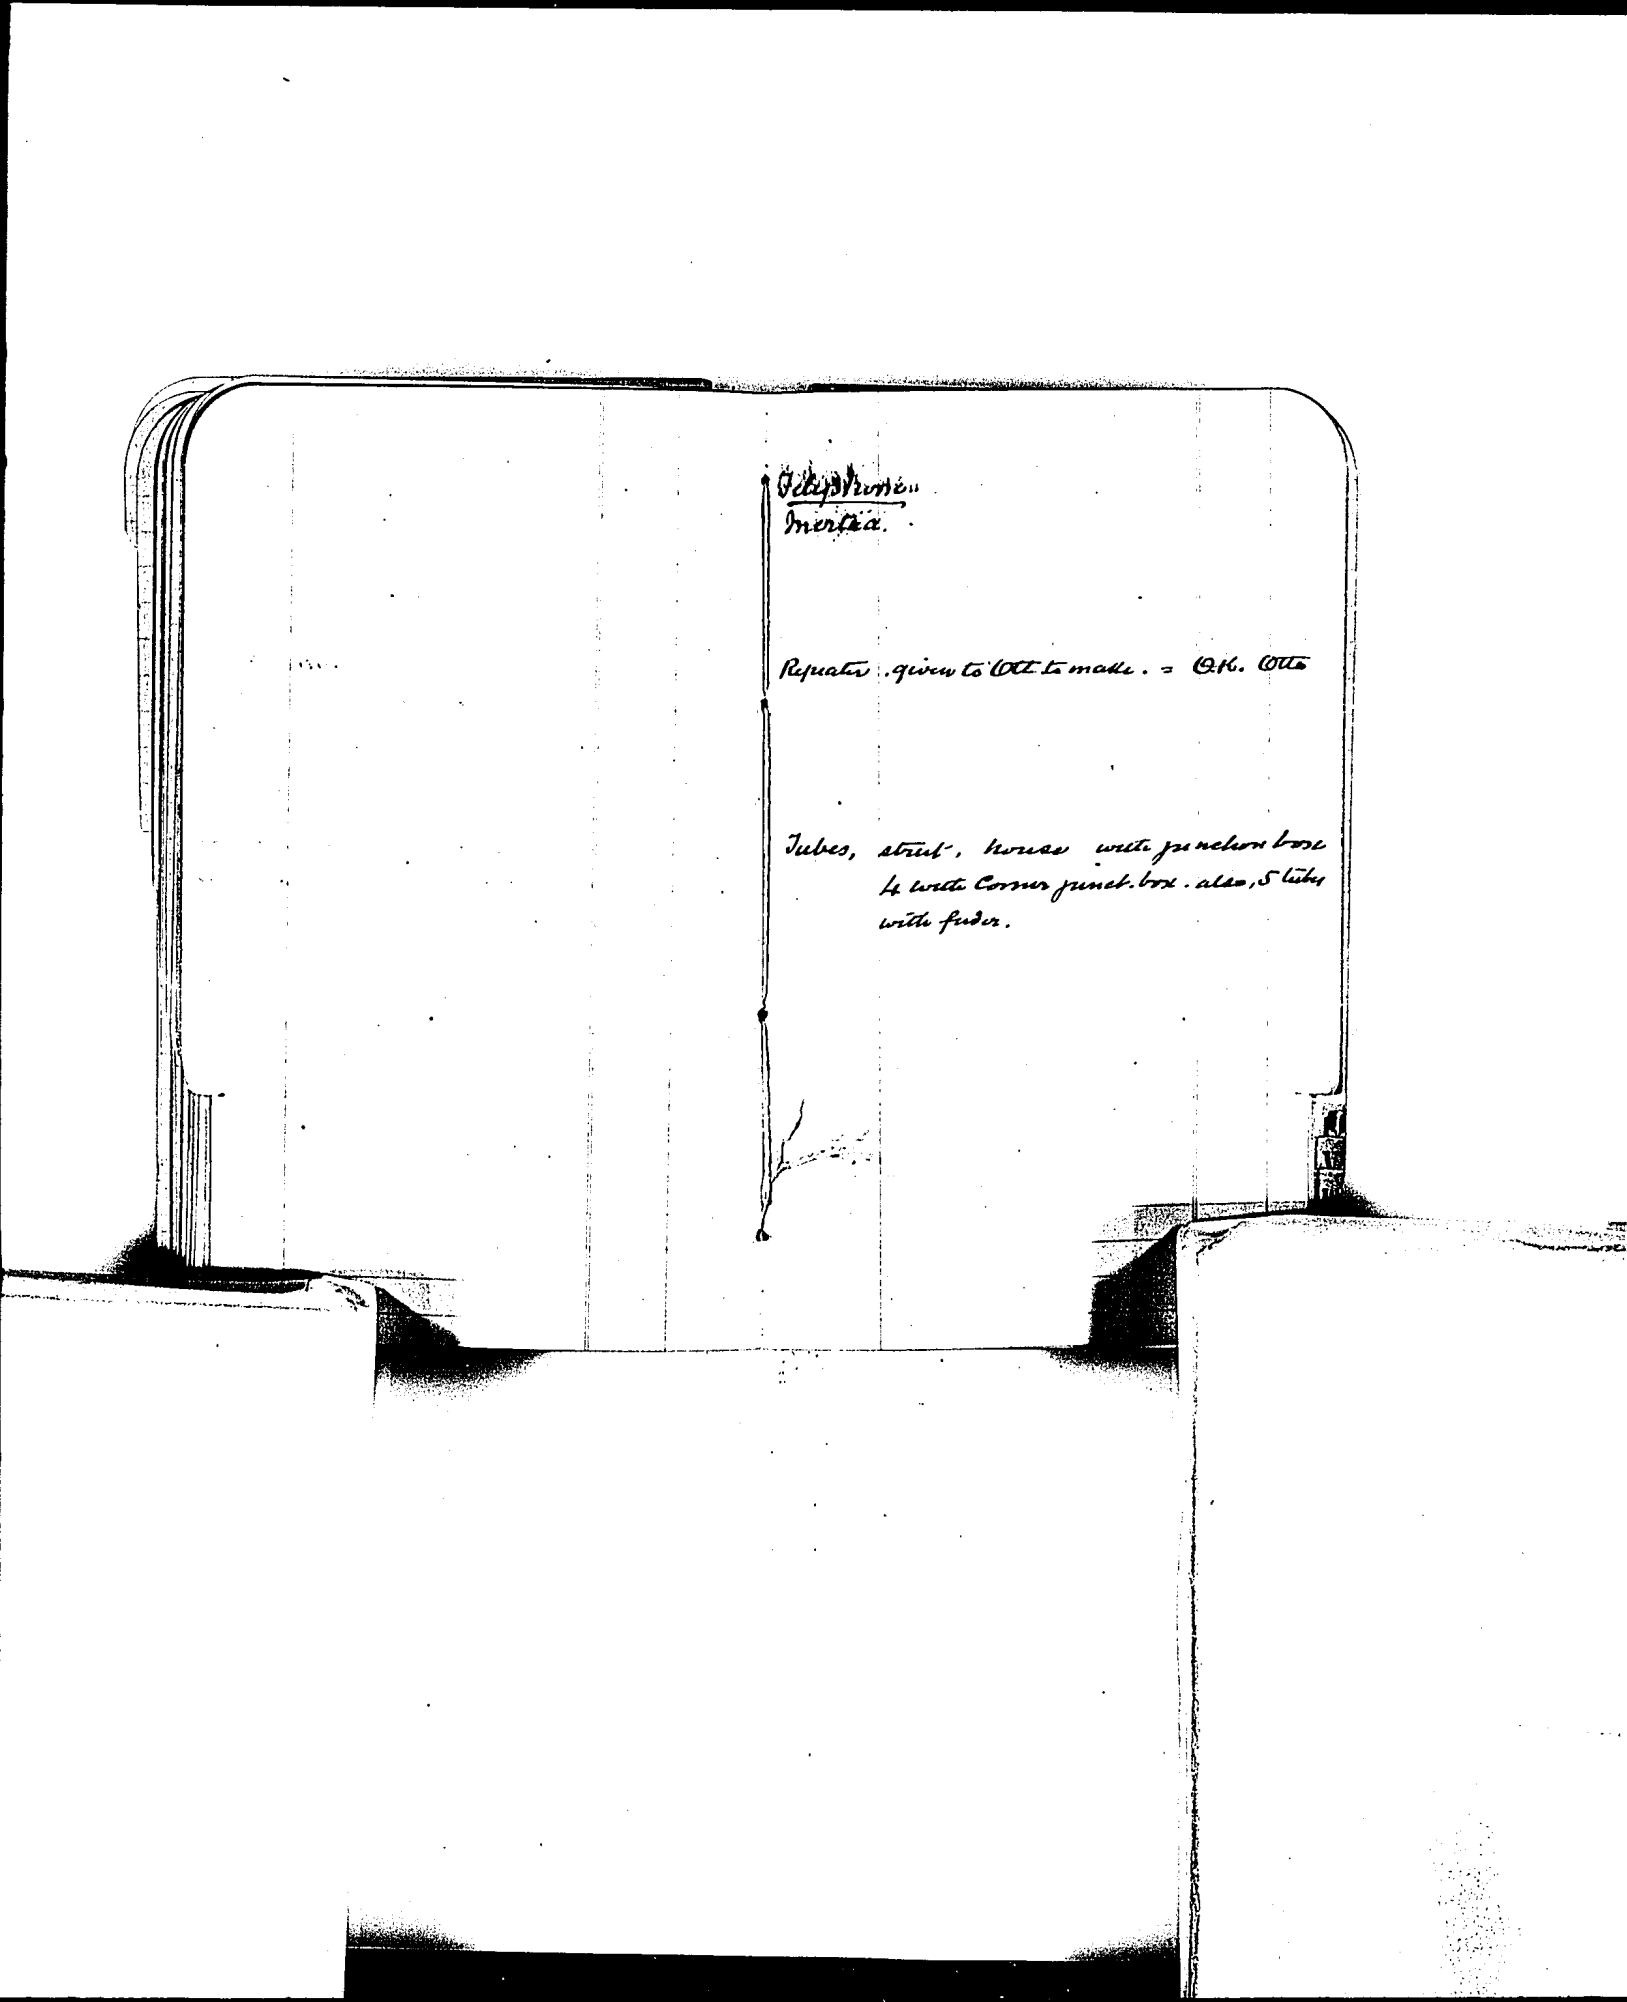
Tasimeter.

Odoroscope.. Coat the expansible rod which presses on carbon button with a substance, and shake a cloth wet with another substance in which the first is soluble, and a pressure is exerted on the button ? to detect odors.

All substances are transparent to Radiant heat; - A plate of iron will allow it to pass in right lines. —

Experiment at Rawlins. Radiant heat finds its way across a vessel containing ice. —

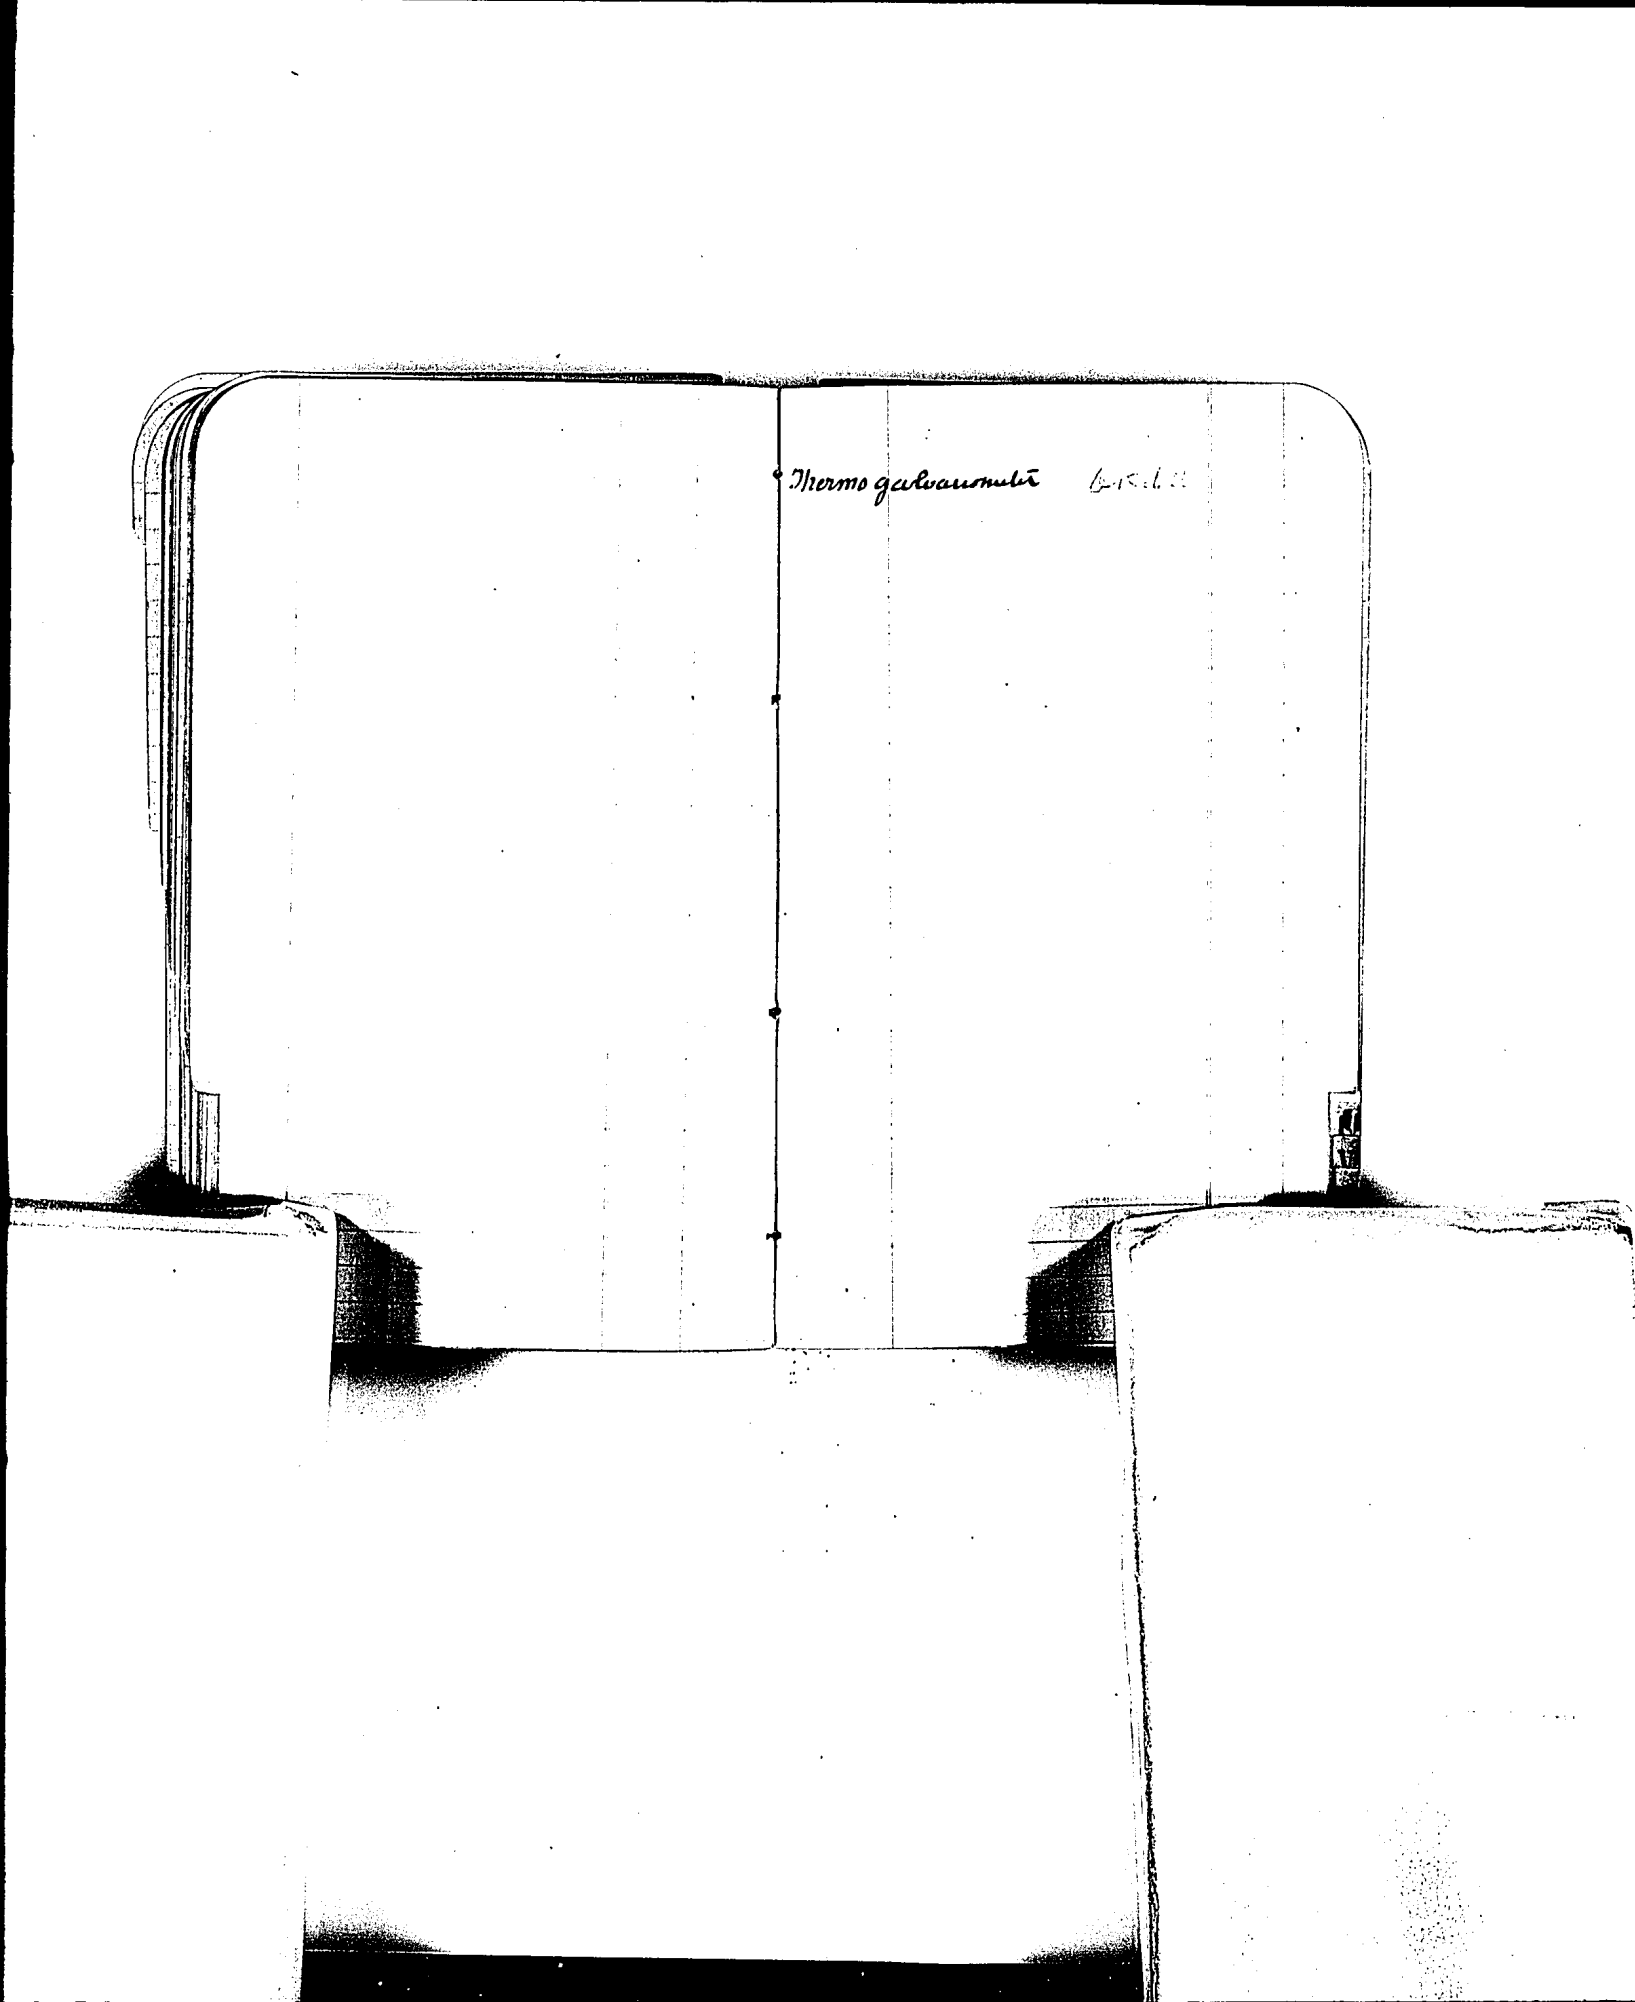
Arrange a concave mirror on the end of a tuning fork and throw the beam from a source of heat on the sensitive pile



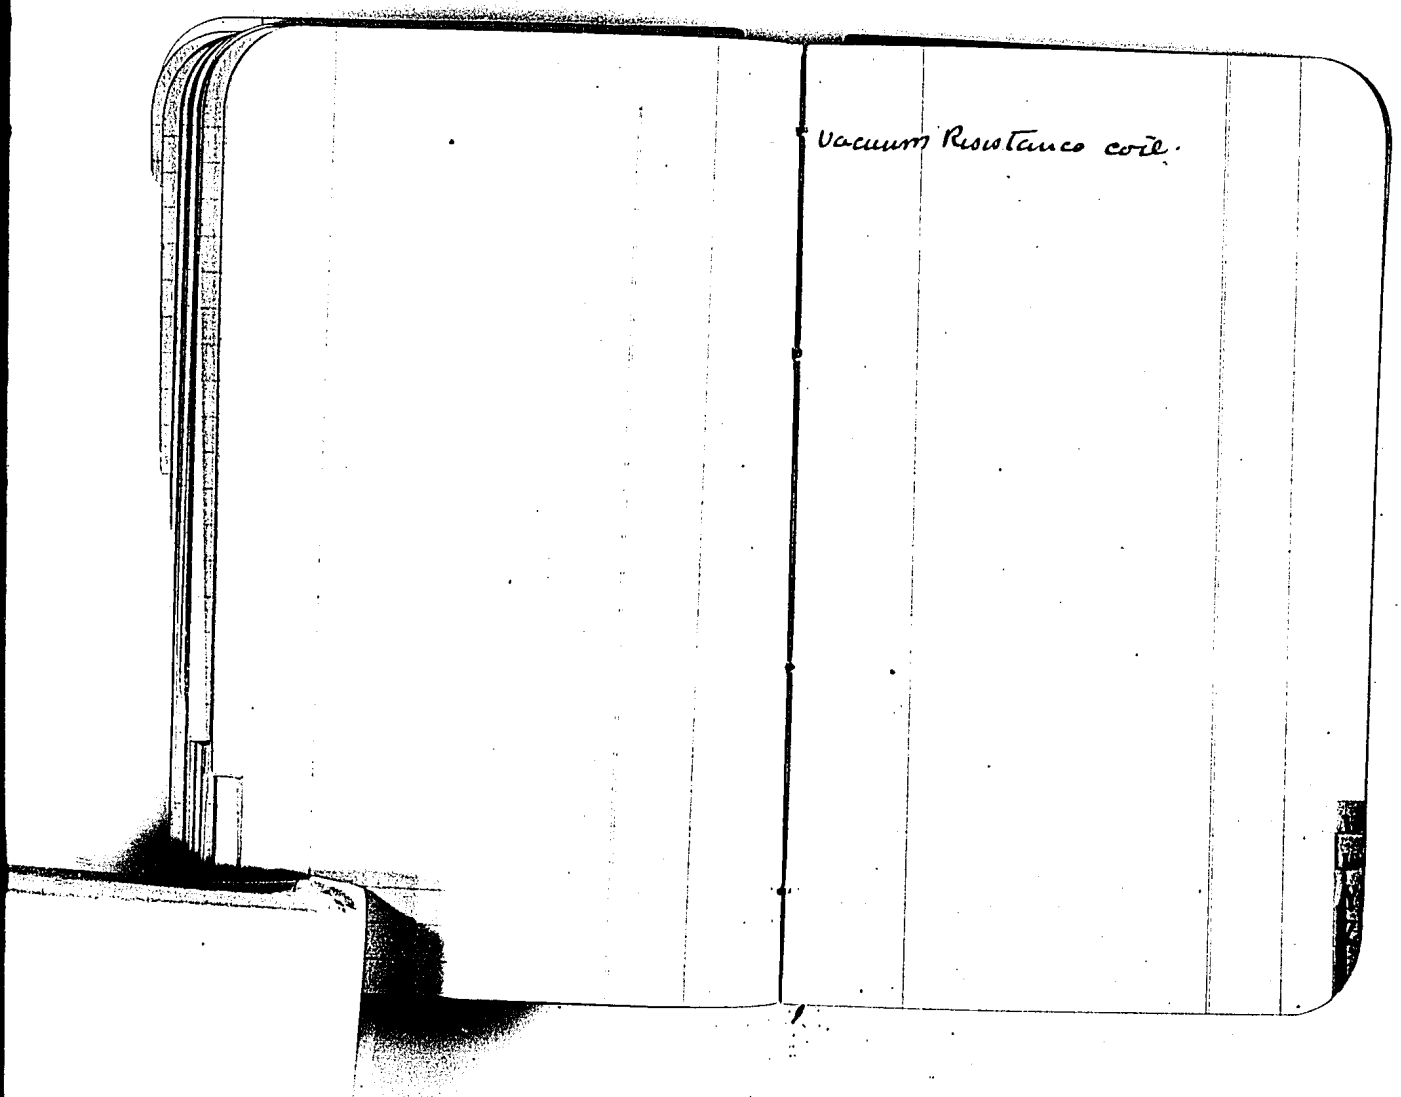
Telephones
Inertia.
Repeater. given to Ott to make. = O.K. Otto
Tubes, straight, horns with parchment base
& with Corner funnel. box. also, 5 tubes
with finder.

Transmitter.

Microphonic all varieties



Thermo galvanometer



Vacuum Resistance coil.
